CODING PROJECTS

CV Recommendation System | *Python, Django*

February – June 2021

- This is an ongoing web application (using Django) to help the recruiter by reducing the tedious work of the recruitment process. This web application will rank applicants based on their skill set, experience, and academic results so that recruiter can easily pick up their desired candidate for further interview.

Blog Application | *Python, Django*

February – March 2021

- This application was built using Django, a web framework of python. This is a single-user web app where only the admin can post a blog and any user can read and comment on it. Users can also share any blog through email. No heavy design is applied here in the frontend.
- Source Code: github.com/hhhameem/Blog-Application

Automated Teller Machine (ATM) | *Java*

November – December 2018

- This is a java application where users can register, login, deposit, and withdraws money. It also has a mobile top-up, pin change, fund transfer balance check feature.
- Source Code: github.com/hhhameem/Automated-Teller-Machine-ATM
